**DETAILED ACTION**

***Claim Objections***

Claims 11-23 are objected to because of the following:

The language of claim 11 recites the functional phrase "surface is rotatable" which only requires the ability to so perform. It is suggested to change the phrase to "surface is configured to rotate".

The language of claim 18 recites the functional phrase "an optical mount adjustable" which only requires the ability to so perform. It is suggested to change the phrase to "an optical mount configured to rotate".

Appropriate correction is required.

***Reasons for Allowance***

Claims 1-5 are allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest the rotating reflective surface configured to receive the transmitted optical beam from the DOE and direct a reflected optical beam to the DOE as set forth in the claimed combination.

Claims 6-10 are allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest the rotating reflective surface configured to receive

Art Unit: 2872

the diffracted portion of the output optical beam and direct a reflected portion to the DOE as set forth in the claimed combination.

Claims 24-27 are allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest reflecting at least a portion of the optical signal beam received from the DOE back to the DOE as set forth in the claimed combination.

Claims 28-30 are allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest diffracting at least a portion of the optical signal reflected to the DOE to a surface of an optical support so that the portion propagates in the optical support at an angle greater than a critical angle with respect to the surface as set forth in the claimed combination.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
